

# WP::SAL Entity Relationships Reference

There are five classes: WP::SAL::Person, WP::SAL::Business, WP::SAL::Location, WP::SAL::Phone and WP::SAL::Null. These are all subclasses of the generic entity class WP::SAL::Entity.

This diagram shows the relationships from each of the four main entity types to the other entity types.

Each relationship comprises an relation type (such as "locations" or "belongs\_to") and a set of fields. These fields are available as fields on the target entity.

As well as the entity and relationship fields shown here, each entity may also have additional fields that expose path information and search results information. These are documented on the WP::SAL Entity Members Reference diagram.
